

## 2021 Confluence Trash Bash Report Estimated Attendance & Collection Summary - Spring 2021

This year's *Confluence Trash Bash* was conducted from April 17-24, 2021 as an entirely self-guided event with no group gatherings due to the Covid-19 pandemic. 18 sites were chosen for either a clean-up or an inlet-marking meeting place. Volunteers could choose a site and register to do a clean-up or mark storm drain inlets at a time of their choice during the weeklong event. The Open Space Council arranged for supplies to be distributed to supply hubs throughout the watershed for volunteers to obtain their cleanup supplies. The Open Space Council monitored all clean up locations throughout the week for illegal dumping activities. MSD helped coordinate the trash pick-up and hauling. This year's figures were compiled from dumpster weights as reported by MSD.

### Event metrics

Total number of sites	Total volunteer attendance	Total trash (tons)	Total number of inlet markers placed	Total number of tires removed
18	421	4.46	416	55

### Map of cleanup and inlet marking sites
